

KRYSTAL™ DMS: LDAP / Active Directory Integration

KRYSTAL™ DMS can be configured with any LDAP or Active Directory Services for user authentication.

The Directory service is a tool for locating, managing, administrating, and organizing network resources, which can include volumes, folders, files, printers, users, groups, and other objects. In computer networking, the Lightweight Directory Access Protocol, or LDAP ("ell-dap"), is a networking protocol for querying and modifying directory services running over TCP/IP. Active Directory is an implementation of LDAP directory services by Microsoft for use in Windows environments.

Users created in **KRYSTAL™ DMS** can be mapped with those existing in the Active Directory Database. This eliminates the need of users to remember different username and passwords for various applications in the network environment to which they are authorized.

KRYSTAL™ DMS allows flexibility in case if an external user requires access to it. In the event that you have external users who will need access to **KRYSTAL™ DMS**, but who are not registered in your Active Directory or LDAP database, you can create these user login IDs without validating them to your Active Directory database.

| Please enter details below. | |
|--|---|
| Real Name | <input type="text" value="Rahul Kubadia"/> |
| Username | <input type="text" value="rahul.kubadia"/> |
| Password | <input type="password" value="*****"/> |
| Confirm Password | <input type="password" value="*****"/> |
| User Email | <input type="text" value="rahul.kubadia@primeleaf.in"/> |
| Description | <input type="text" value="Document Manager"/> |
| Work Queues | <input checked="" type="radio"/> Yes <input type="radio"/> N |
| Can Search? | <input checked="" type="radio"/> Yes <input type="radio"/> N |
| LDAP / AD SI | ARYSYS <input type="button" value="v"/> |
| Select Domain | <input type="text" value="DEFAULT"/> <input type="text" value="DELHI"/> <input type="text" value="MUMBAI"/> <input type="text" value="ARYSYS"/> |
| Select Group | <input type="text" value="Administrators"/> <input type="text" value="DMS Users"/> |
| Select User Roles | <input type="text" value="Document Managers"/> <input type="text" value="Super Claims Administrator"/> <input type="text" value="Claims Administrator"/> <input type="text" value="Registered Nurse"/> |
| <input type="button" value="Save"/> <input type="button" value="Reset"/> | |

User information pertaining strictly to **KRYSTAL™ DMS** is still maintained and administered from within **KRYSTAL™ DMS**, for example, user access permissions, groups, roles etc. While creating a user in **KRYSTAL™ DMS**, System Administrator can identify that the user to be authenticated against LDAP / Active Directory by selecting the LDAP /ADSI Dropdown.

Note: All users of KRYSTAL™ DMS must be registered in KRYSTAL™ EMDS regardless of whether they are registered in the LDAP / Active Directory Database.
